I am a results-oriented and innovative software professional. With my entrepreneurial experience, I have made strategic contributions to my projects and delivered solutions that enhance customer satisfaction. With strong leadership, problem-solving, and teamwork skills, I aim to contribute to digital transformation processes while continually achieving my development goals. Throughout my career, I strive to engage in creative and results-driven projects, aiming to increase the competitive advantage of organizations and create value.

WORK EXPERIENCE

Software Developer   Dec 2023 - Present
U&G Consulting Inc., İstanbul/Fatih

Technologies: ASP.NET (2.0, 4.5, 8.0), Java, Javascript, REST, OracleSQL, PLSQL, Spring Framework, Hibernate, Python, Bash Scripting, GemBox, ITextSharp, PDFSharp, OracleLinux, Gitlab API (v3 & v4), JSON, SOAP, PupeeterSharp, SignalR, Git, SonarQube

- In ASP.NET-based projects, I transformed static systems into dynamic, database-driven architectures, developing customer-centric solutions.
- By establishing a module structure with a Multi-Threading infrastructure, I enabled 13 Windows services to run on isolated cores, eliminating the challenges of development, updates, and management.
- Within the scope of MASAK, I developed systems (Fineksus, Uyumbaz, U&G Blacklist) that identify customers, partners, and investors with frozen assets and automatically direct transactions to intelligence steps.
- By creating a workflow on GitLab, I integrated self-hosted SonarQube, automating code quality analysis and optimizing continuous integration processes.
- I developed a system with GitLab API integration to track and report the time employees spent on requests.
- By managing integrations in the GitLab environment, I optimized customer, support, and development steps with a Jira-like structure.
- While managing the gradual upgrade of our self-hosted GitLab version and OracleLinux environment, I modernized API integrations (from v3 to v4) to enhance infrastructure efficiency.
- I built systems that automatically compile development notes into release notes and provide automatic customer notifications for resolved requests during GitLab release processes.

Founder & Java Developer   Jun 2020 - Jun 2023
Geik.xyz & GEdition, İstanbul

Technologies: Java, Spigot, HikariCP, MySQL, SQLite, H2, PostgreSQL, YAML, PHP, REST API

- In the process of developing custom plugins for Minecraft, I created projects using Java and Spigot infrastructure.
- I established a significant presence in the digital market with 500+ customers and over 1000 license sales.
- In 2022, I developed a Java-based license library integrated with a REST API license verification system; implemented Discord Bot integration and Socket structure to enable role synchronization and real-time purchase notifications.
- During this process, I gained advanced technical and managerial experience in project management, customer-focused product development, and digital marketing.

EDUCATION AND QUALIFICATIONS

Mechatronics Associate Degree   Sep 2018 - Jun 2021
Akdeniz Univercity, Antalya

Associate Degree in Computer Programming   Sep 2021 - Present
Anadolu Univercity, AÖF

SKILLS

Java	Expert
REST API	Expert
Problem Solving	Expert
Teamwork and Communication	Expert
ASP.NET (2.0, 4.5, 8.0)	Experienced
Workflow Management	Experienced
CI/CD	Experienced
Multi-Threading	Experienced
Database Management	Experienced
Automation	Experienced
Agile Methodologies & Process Optimization	Skillful

LANGUAGES

English	Intermediate
